

Raviraj Mahendra Bugge

Senior Full Stack Developer

Pune, Maharashtra, India | +91 7798476162 | ravirajbugge4585@gmail.com

LinkedIn | GitHub | Portfolio

Professional Summary

Senior Full Stack Developer with nearly 4 years of experience building scalable web applications, enterprise CRM systems, healthcare platforms, and internal development tools. Experienced in React.js, Node.js, PHP, PostgreSQL, and MySQL, with strong expertise in frontend engineering and full-stack application development.

Proven track record of improving development workflows, modernizing legacy systems, building AI-powered solutions using RAG pipelines and local LLMs, and delivering business-critical features across healthcare and CRM domains. Experienced in REST API development, database design, workflow automation, performance optimization, and cross-functional collaboration.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, PHP, HTML5, CSS3

Frontend: React.js, React Hook Form, Material UI, Tailwind CSS, Bootstrap CSS, Vite, Webpack

Backend: Node.js, Express.js, PHP, REST APIs, JWT Authentication, RBAC, Microservices, Cron Jobs

Databases: PostgreSQL, MySQL, Sequelize ORM

Cloud DevOps: Git, AWS S3, AWS CloudFront, AWS Secrets Manager, PM2

AI Data: RAG Pipelines, ChromaDB, Ollama, BioMistral, Nomic Embeddings, Semantic Search

Engineering Practices: Code Reviews, Git Workflows, Database Migrations, Query Optimization, Indexing, Unit Testing

Professional Experience

Tagrem India Pvt. Ltd. *Senior Software Engineer*

Jun 2025 – Present

- Contributing to a large-scale CRM platform built using React.js, PHP, PostgreSQL, and microservice-based architecture.
- Enhanced the organization's internal form and grid generation platform by introducing dynamic drawer configuration capabilities, reducing manual customization effort and improving developer productivity.
- Designed reusable configuration workflows that eliminated the need for frontend and backend overrides while implementing complex business actions.
- Created AI-assisted Codex skillsets and structured engineering instructions that reduced form and grid generation time from more than 3 hours to approximately 15 minutes.
- Independently developed the Process Vendor Payments Audit module used to validate and reconcile vendor-submitted vehicle repair and auction records.
- Built audit workflows capable of processing large-scale vehicle reconciliation records, reducing manual verification time from one week to approximately two hours.
- Worked extensively with React.js, PostgreSQL, PHP, and internal workflow engines to deliver business-critical CRM functionality.
- Improved maintainability and reliability across existing enterprise workflows and legacy systems.

Borm Bruckmeier Infotech India Pvt. Ltd.

Senior Software Engineer

Jun 2024 – Jul 2025

- Led frontend modernization initiatives across healthcare platforms, improving responsiveness, usability, and maintainability.
- Architected and implemented Retrieval-Augmented Generation (RAG) pipelines using ChromaDB, Nomic Embeddings, and BioMistral models running through Ollama.
- Developed AI-assisted knowledge retrieval workflows using semantic search and similarity-based document retrieval techniques.
- Migrated image-based content pages into dynamic template-driven systems, significantly reducing page weight and improving frontend performance.
- Improved deployment reliability and service management using PM2 and structured deployment workflows.
- Participated in architecture discussions, code reviews, release activities, and engineering process improvements.
- Mentored junior developers and supported engineering best practices across projects.

Software Engineer

Jun 2023 – Jun 2024

- Developed full-stack dashboard and administrative modules using React.js, Node.js, Express.js, Sequelize ORM, and MySQL.
- Built scalable REST APIs supporting authentication, authorization, filtering, pagination, and business workflows.
- Implemented database migrations, schema design improvements, indexing strategies, and query optimization initiatives.
- Established unit testing practices and development standards to improve application reliability.
- Introduced commit-linting, pre-commit validation, and pull-request workflows to improve code quality and consistency.
- Collaborated with product owners, medical experts, and cross-functional teams to translate business requirements into technical solutions.

Junior Software Developer

Jun 2022 – Jun 2023

- Developed responsive user interfaces using HTML, CSS, JavaScript, and PHP.
- Built and maintained backend features supporting enterprise healthcare applications.
- Integrated REST APIs and improved data flow across internal platforms.
- Resolved critical frontend and backend issues, improving system stability and user experience.
- Supported integrations involving AWS S3, CloudFront, and Secrets Manager.
- Contributed to technical documentation and developer onboarding resources.

Projects

Medication DB (Centralized Drug Knowledge Platform)

- Contributed to the design and development of a centralized healthcare knowledge platform intended to provide normalized drug information services across multiple products.
- Worked closely with medical experts to convert complex healthcare workflows into scalable technical solutions.
- Developed FHIR-compatible data structures supporting ATC/DDD classifications, SNOMED terminology, dosage guidelines, and clinical reference data.
- Built backend services using Node.js, React.js, Sequelize ORM, and SQL-based databases.
- Implemented JWT-based authentication and trusted-consumer API access mechanisms.

- Developed automated import pipelines for processing and normalizing international drug datasets and healthcare terminology standards.
- Supported deployment automation using GitHub Actions and internal infrastructure.

CDST Editor

- Modernized user interfaces across clinical decision support tooling used by internal medical teams.
- Improved mobile usability, accessibility, and maintainability of legacy healthcare workflows.
- Contributed to AI-assisted automation initiatives for medical tool generation.

ACOMS

- Developed secure content management capabilities for clinical guideline platforms.
- Built RBAC-enabled workflows and strengthened backend validation mechanisms.
- Implemented automated backup and content management processes.

ESC Web Application

- Converted legacy image-based content structures into reusable dynamic templates.
- Reduced page load times and improved frontend performance through component-based architecture.
- Eliminated unnecessary API requests and improved application responsiveness.

Education

Bachelor of Engineering (Computer Engineering) D. Y. Patil College of Engineering, Akurdi Savitribai Phule Pune University 2022 CGPA: 8.4
