PROFESSIONAL SUMMARY

Senior Full Stack Developer with 4+ years of experience delivering scalable, production-grade web applications across MedTech and SaaS/CRM domains. Skilled in building complex React.js frontends, robust PHP and Node.js backends, and optimised PostgreSQL and MySQL databases. Consistently delivers high-quality solutions — from resolving deep-rooted legacy issues to engineering meaningful performance improvements and shipping new features end-to-end. Brings hands-on experience integrating LLM and RAG pipeline-based tooling into real-world workflows, with a strong focus on code quality, developer experience, and maintainable architecture.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, PHP, HTML5, CSS3

Frontend: React.js, Bootstrap, Tailwind CSS

Backend: Node.js, PHP, REST APIs

Databases: PostgreSQL, MySQL, Sequelize ORM

AI / LLM: RAG Pipeline, LangChain, Ollama, Mistral, Codex CLI, Claude Code

Cloud: AWS RDS, AWS Secrets Manager

Dev Tools: Git, Postman, ESLint, Prettier, Rector, MAMP, npm, Composer

Design: Figma, Adobe XD

WORK EXPERIENCE

Senior Software Developer

Jun 2025 – Present

Tagrem India Pvt Ltd · Pune, MH

- Develop and maintain SalesCrm — a vehicle-donation management platform serving donors, nonprofit organisations, and auction vendors across the US, handling the full lifecycle from pickup scheduling to tax paperwork generation.
- Build and maintain dynamic data-collection forms and high-performance data grids, resolving save/load bugs and implementing advanced filtering, sorting, and column customisation as per client requirements.
- Optimise PostgreSQL queries powering large data grids through targeted indexing and query restructuring, improving grid load performance noticeably.
- Created reusable Codex CLI skills and prompt instructions to automate repetitive form and grid scaffolding tasks, reducing time spent on standard CRUD modules.
- Tech stack: React.js, PHP, PostgreSQL, Bootstrap, TypeScript, Postman, MAMP, Codex CLI.

Senior Software Developer

Jun 2022 – Jun 2025

Boerm Bruckmeier Infotech India Pvt Ltd · Pune, MH

- Contributed to CE-certified MedTech products for globally recognised medical societies — ESC, ASCO, STIKO, EHRA — including the ESC Pocket Guidelines and Arzneimittel Pocket (AP) apps used by clinicians worldwide.
- Diagnosed and resolved a critical render-blocking issue in the ESC web app by replacing eagerly-fetched JPG assets with pure-CSS equivalents, reducing initial page load time from ~17 seconds to ~1 second.
- Improved data-table rendering across multiple legacy projects by implementing server-side pagination, significantly reducing perceived load times for large datasets.

- Took ownership of architectural decisions on two concurrent projects — selecting tech stacks, structuring codebases, and defining delivery milestones — while collaborating closely with teammates and supporting junior developers through code reviews and knowledge sharing.
- Designed and built the Medication Database project from the ground up: authored the full database schema, chose the technology stack, and delivered the working system independently.
- Maintained and evolved the CDST Editor — the company's core internal tool for Clinical Decision Support content — resolving long-standing legacy bugs and shipping feature additions that improved editorial stability.
- Drove a PHP legacy migration using Rector, configuring PSR-compliant formatting and linting rules to produce a clean, modern codebase from the outset.
- Developed a CLI tool that bootstrapped ESLint, Prettier, commit-lint, and pre/post-commit hooks across all JS projects in a single command, standardising code style and Git log quality across the engineering team.
- Introduced Composer (PHP) and npm (JS) to replace manually downloaded dependencies across legacy projects, bringing all codebases into reproducible, version-controlled package management.
- Participated in an R&D effort exploring RAG pipelines and LangChain to automate repetitive editorial workflows within the CDST Editor ecosystem.
- Tech stack: HTML, CSS, JavaScript, TypeScript, React.js, Node.js, PHP, MySQL, PostgreSQL, Sequelize, AWS RDS, AWS Secrets Manager, Bootstrap, Tailwind CSS, Rector, ESLint, Prettier, LangChain, Codex.

PROJECTS

Resume Lens [GitHub](#)

Tech: React.js, Node.js, Ollama, Mistral LLM, RAG Pipeline

- Built a privacy-first, local ATS checker and resume-tailoring tool that runs entirely on-device using Ollama + Mistral — eliminating data-privacy concerns associated with cloud-based alternatives.
- Uses a RAG pipeline to compare a job description against a resume and surface keyword gaps, skill mismatches, and targeted improvement recommendations.
- Built out of frustration with paywalled ATS tools; actively used as part of personal job-application workflow.

Spend Wise [GitHub](#)

Tech: React.js, Firebase, PWA (Service Workers, Local Storage)

- Personal finance tracker built as a Progressive Web App with an offline-first architecture — transactions persist to Local Storage when offline and sync automatically to Firebase once connectivity is restored.
- Serverless architecture using Firebase Realtime Database eliminates the need for a dedicated backend while enabling real-time sync across devices.

EDUCATION

B.E. Computer Engineering

2017 – 2022

[D.Y. Patil College of Engineering, Akurdi, Pune](#) · Savitribai Phule Pune University

Aggregate: 71.40%
